Project Banner

Used for temporary, project-wide notifications that require resolution

Default

Hide code

```tsx
import { ProjectBanner } from '@vercel/geistcn/components';
import { IconShieldCheck } from '@vercel/geistcn-assets/icons';
import type { JSX } from 'react';

export function Component(): JSX.Element {
  return (
    <ProjectBanner
      callToAction={{
        label: 'Disable',
        href: '/',
      }}
      icon={<IconShieldCheck className="shrink-0" />}
      label={<>Attack Challenge Mode is enabled for this project</>}
    />
  );
}
```

Success

For positive, temporary mitigations put in place to protect a project, e.g., Attack Challenge Mode

Hide code

```tsx
import type { ProjectBannerProps } from '@vercel/geistcn/components';
import { ProjectBanner } from '@vercel/geistcn/components';
import type { JSX } from 'react';
import { IconShieldCheck } from '@vercel/geistcn-assets/icons';

const ProjectBannerVariants: ProjectBannerProps['variant'][] = ['success'];

export function Component(): JSX.Element {
  return (
    <div className="flex flex-col items-stretch justify-start gap-6 flex-initial">
      {ProjectBannerVariants.map((variant) => {
        return (
          <div
            key={variant}
            className="flex flex-col items-stretch justify-start gap-2 flex-initial"
          >
            <div className="flex flex-col items-stretch justify-start gap-2 flex-initial">
              <ProjectBanner
                callToAction={{
                  label: 'Disable',
                  href: '/',
                }}
                icon={<IconShieldCheck className="shrink-0" />}
                label={<>Attack Challenge Mode is enabled for this project</>}
                variant={variant}
              />
            </div>
          </div>
        );
      })}
    </div>
  );
}
```

Warning

When a project is in an exceptional state which requires non-immediate action to exit, e.g., during a rollback

Hide code

```tsx
import type { ProjectBannerProps } from '@vercel/geistcn/components';
import { ProjectBanner, Tooltip } from '@vercel/geistcn/components';
import type { JSX } from 'react';
import { IconRotateCounterClockwise } from '@vercel/geistcn-assets/icons';

const ProjectBannerVariants: ProjectBannerProps['variant'][] = ['warning'];

export function Component(): JSX.Element {
  return (
    <div className="flex flex-col items-stretch justify-start gap-6 flex-initial">
      {ProjectBannerVariants.map((variant) => {
        return (
          <div
            key={variant}
            className="flex flex-col items-stretch justify-start gap-2 flex-initial"
          >
            <div className="flex flex-col items-stretch justify-start gap-2 flex-initial">
              <ProjectBanner
                callToAction={{
                  label: 'Undo Rollback',
                  onClick: () => {
                    alert('Button clicked');
                  },
                }}
                icon={<IconRotateCounterClockwise />}
                label={
                  <>
                    This project was rolled back by{' '}
                    <Tooltip
                      className="underline decoration-dashed underline-offset-[5px]"
                      text="Yesterday for project marketing-website"
                    >
                      @johnphamous
                    </Tooltip>
                  </>
                }
                variant={variant}
              />
```

```
            </div>
          </div>
        );
      })}
    </div>
  );
}
```

Error

When a project is approaching or experiencing critical downtime which requires immediate attention, e.g., when payment is overdue

Hide code

```tsx
import type { ProjectBannerProps } from '@vercel/geistcn/components';
import { ProjectBanner } from '@vercel/geistcn/components';
import type { JSX } from 'react';
import { IconWarning } from '@vercel/geistcn-assets/icons';

const ProjectBannerVariants: ProjectBannerProps['variant'][] = ['error'];

export function Component(): JSX.Element {
  return (
    <div className="flex flex-col items-stretch justify-start gap-6 flex-initial">
      {ProjectBannerVariants.map((variant) => {
        return (
          <div
            key={variant}
            className="flex flex-col items-stretch justify-start gap-2 flex-initial"
          >
            <div key={variant} />
            <ProjectBanner
              callToAction={{
                label: 'Add Credit Card',
                href: '/$',
              }}
              icon={<IconWarning />}
              label={
                <>
                  Payment failed, update credit card information before your
                  account is shut down
                </>
              }
              variant="error"
            />
          </div>
        </div>
        );
      })}
    </div>
  );
}
```

Best Practices

When to use

- Use Project Banner for project-wide states that need resolution: overdue billing, an active rollback, attack mitigation, an expiring trial blocking deploys.
- Pick ⚛ **Note** for inline contextual messages tied to a single field or card, ⚛ **Toast** for transient acknowledgments, ⚛ **Modal** for confirmations.
- Match `variant` to severity: `error` for critical downtime or payment-blocking states, `warning` for an exceptional state with non-immediate action, `success` for a positive temporary mitigation, `gray` for routine project-wide notices.

Behavior

- Project Banner is non-dismissible by design. If the message can be dismissed without resolving the underlying state, it isn't banner-worthy; move it to a ⚛ **Note**.
- Show one Project Banner at a time. Stacking competing banners drowns the most urgent state.
- Always pass a `callToAction` that resolves the state. A banner with no route is a dead end.

Content

- `label` is one sentence in sentence case that names the impact: `Your Pro trial expires in 3 days.` Don't open with `Heads up` or apologetic preambles.
- `callToAction.label` is Title Case `Verb + Noun` and points at the resolver: `Update Payment Method`, `Reactivate Project`, `Review Tokens`.
- Name the affected entity when the project context isn't obvious from the surrounding chrome (`Production deployments are paused on my-project`).
- Don't encode severity in the copy with emoji or interjections; the variant carries that signal.
