Toggle

Displays a boolean value.

Default

Hide code

```tsx
import { Toggle } from '@vercel/geistcn/components';
import { useState, type JSX } from 'react';

export function Component(): JSX.Element {
  const [checked, setChecked] = useState(false);
  const [checked2, setChecked2] = useState(true);

  return (
    <div className="flex relative min-w-px max-w-full flex-col flex-1">
      <div className="flex relative min-w-px max-w-full flex-col flex-1">
        <Toggle
          aria-label="Enable Firewall"
          checked={checked}
          onChange={(): void => setChecked(!checked)}
        />
      </div>

      <div className="flex relative min-w-px max-w-full flex-col flex-1">
        <Toggle
          aria-label="Enable Firewall"
          checked={checked2}
          onChange={(): void => setChecked2(!checked2)}
        />
      </div>
    </div>
  );
}
```

Disabled

Hide code

```tsx
import { Toggle } from '@vercel/geistcn/components';
import type { JSX } from 'react';

export function Component(): JSX.Element {
  return (
    <div className="flex relative min-w-px max-w-full flex-col flex-1">
      <div className="flex relative min-w-px max-w-full flex-col flex-1">
        <Toggle aria-label="Enable Firewall" checked={false} disabled />
      </div>

      <div className="flex relative min-w-px max-w-full flex-col flex-1">
        <Toggle aria-label="Enable Firewall" checked disabled />
      </div>
    </div>
  );
}
```

Sizes

Hide code

```tsx
import { Toggle } from '@vercel/geistcn/components';
import type { JSX } from 'react';

export function Component(): JSX.Element {
  return (
    <div className="flex relative min-w-px max-w-full flex-row flex-wrap flex-1">
      <div className="flex relative min-w-px max-w-full flex-col flex-1">
        <Toggle aria-label="Enable Firewall" checked={false} />
      </div>

      <div className="flex relative min-w-px max-w-full flex-col flex-1">
        <Toggle aria-label="Enable Firewall" checked={false} size="medium" />
      </div>

      <div className="flex relative min-w-px max-w-full flex-col flex-1">
        <Toggle aria-label="Enable Firewall" checked={false} size="large" />
      </div>
    </div>
  );
}
```

Custom Color

Hide code

```tsx
import { Toggle } from '@vercel/geistcn/components';
import { useState, type JSX } from 'react';
import {
  IconLockClosedSmall,
  IconLockOpenSmall,
} from '@vercel/geistcn-assets/icons';

export function Component(): JSX.Element {
  const [checked, setChecked] = useState(false);
```

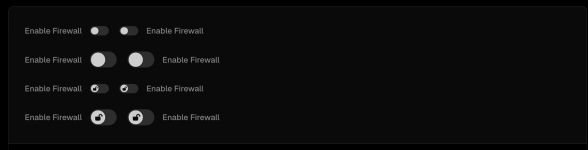

```
  return (
    <div className="flex relative min-w-px max-w-full flex-col flex-1">
      <div className="flex relative min-w-px max-w-full flex-col flex-1">
        <Toggle
          aria-label="Enable Firewall"
          checked={checked}
          color="amber"
          icon={{
            checked: <IconLockClosedSmall />,
            unchecked: <IconLockOpenSmall />,
          }}
          onChange={(): void => setChecked(!checked)}
        />
      </div>

      <div className="flex relative min-w-px max-w-full flex-col flex-1">
        <Toggle
          aria-label="Enable Firewall"
          checked={checked}
          color="red"
          icon={{
            checked: <IconLockClosedSmall />,
            unchecked: <IconLockOpenSmall />,
          }}
          onChange={(): void => setChecked(!checked)}
        />
      </div>

      <div className="flex relative min-w-px max-w-full flex-col flex-1">
        <Toggle
          aria-label="Enable Firewall"
          checked={checked}
          color="amber"
          icon={{
            checked: <IconLockClosedSmall />,
            unchecked: <IconLockOpenSmall />,
          }}
          onChange={(): void => setChecked(!checked)}
          size="large"
        />
      </div>

      <div className="flex relative min-w-px max-w-full flex-col flex-1">
        <Toggle
          aria-label="Enable Firewall"
          checked={checked}
          color="red"
          icon={{
            checked: <IconLockClosedSmall />,
            unchecked: <IconLockOpenSmall />,
          }}
          onChange={(): void => setChecked(!checked)}
          size="large"
        />
      </div>
    </div>
  );
}
```

With Label

Hide code

```
import { Toggle } from '@vercel/geistcn/components';
import { useState, type JSX } from 'react';
import {
  IconLockClosedSmall,
  IconLockOpenSmall,
} from '@vercel/geistcn-assets/icons';

export function Component(): JSX.Element {
  const [checked, setChecked] = useState(false);

  return (
    <div className="flex flex-col items-start justify-start gap-4 flex-initial">
      <div className="flex flex-row items-stretch justify-start gap-4 flex-initial">
        <Toggle checked={checked} onChange={(): void => setChecked(!checked)}>
          Enable Firewall
        </Toggle>
        <Toggle
          checked={checked}
          direction="switch-first"
          onChange={(): void => setChecked(!checked)}
        >
          Enable Firewall
        </Toggle>
      </div>
      <div className="flex flex-row items-stretch justify-start gap-4 flex-initial">
        <Toggle
          checked={checked}
          onChange={(): void => setChecked(!checked)}
          size="large"
        >
          Enable Firewall
        </Toggle>
        <Toggle
          checked={checked}
          direction="switch-first"
          onChange={(): void => setChecked(!checked)}
          size="large"
        >
          Enable Firewall
        </Toggle>
      </div>
      <div className="flex flex-row items-stretch justify-start gap-4 flex-initial">
        <Toggle
          checked={checked}
          icon={{
            checked: <IconLockClosedSmall />,
            unchecked: <IconLockOpenSmall />,
          }}
          onChange={(): void => setChecked(!checked)}
        >
          Enable Firewall
        </Toggle>
        <Toggle
          checked={checked}
          direction="switch-first"
          icon={{
            checked: <IconLockClosedSmall />,
            unchecked: <IconLockOpenSmall />,
          }}
          onChange={(): void => setChecked(!checked)}
        >
          Enable Firewall
        </Toggle>
      </div>
      <div className="flex flex-row items-stretch justify-start gap-4 flex-initial">
        <Toggle
          checked={checked}
          icon={{
```

```
            checked: <IconLockClosedSmall />,
            unchecked: <IconLockOpenSmall />,
          }}
          onChange={(): void => setChecked(!checked)}
          size="large"
        >
          Enable Firewall
        </Toggle>
        <Toggle
          checked={checked}
          direction="switch-first"
          icon={{
            checked: <IconLockClosedSmall />,
            unchecked: <IconLockOpenSmall />,
          }}
          onChange={(): void => setChecked(!checked)}
          size="large"
        >
          Enable Firewall
        </Toggle>
      </div>
    </div>
  );
}
```

Best Practices

- Use Toggle for a single boolean setting where ON takes effect immediately, like `Password Protection` or `Auto-Cancel Builds`. Switch to **Checkbox** for a multi-select list, or to **Switch** for 2–3 mutually exclusive views.
- `checked` is required and the component is controlled. Own the state and update it from `onChange`.
- Persist on change and surface the result in a `useToasts().success(…)` toast (`Password protection enabled`); don't leave the user wondering whether the flip stuck. Pair with a form footer only when the setting needs an explicit `Save` step.
- Disable Toggle only when the action is impossible (missing plan, locked policy); pair with helper text or a **Tooltip** that names the resolver.
- The label is `children`, not a `label` prop. Title Case noun phrase, 1–4 words, naming what is true when ON: `Password Protection`, not `Enable Password Protection`.
- Render an optional one-sentence description as a sibling under the label that explains ON only. Don't describe OFF; it's the negation.
- Keep `labelCasing="title"` (the default) so labels match other Title Case surfaces. Use `labelCasing="normal"` only when sentence-case content sits inline next to the toggle.
- Provide an accessible name through `children`, `aria-label`, or `aria-labelledby`. Geist warns in development if all three are missing.
- Set `aria-label` only when the visible label sits elsewhere on the row; otherwise let `children` carry it so sighted and screen-reader copy stay aligned.
