"use workflow" for infinite compute durability

With zero configuration, atomic versioning and out of the box observability, Vercel makes Workflows easy

Get started

```
$ npm install workflow
```

MUX Whop NEON durable FLORA Morphic

Powered by Workflow SDK

Workflows bring durability, reliability, and observability to async JavaScript. Build apps and AI Agents that can suspend, resume, and maintain state with ease.

Get started

With Workflow SDK | Without Workflow SDK

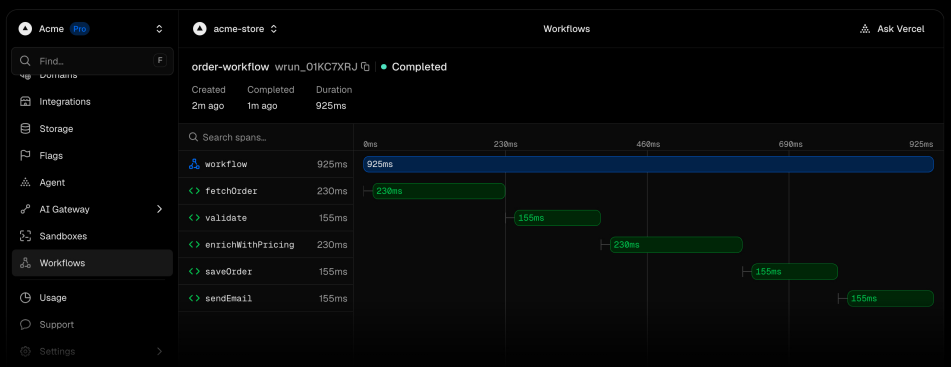

```
export async function welcome(userId: string) {
  "use workflow";
  const user = await getUser(userId);
  const { subject, body } = await generateEmail({
    name: user.name, plan: user.plan
  });
  const { status } = await sendEmail({
    to: user.email,
    subject,
    body,
  });
  return { status, subject, body };
}
```

Running the generateEmail step...

Observability

Inspect every run end-to-end

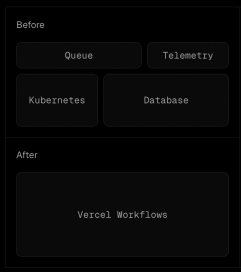

When deploying a workflow on Vercel, deep workflow observability is built into the Vercel dashboard with no configuration or storage

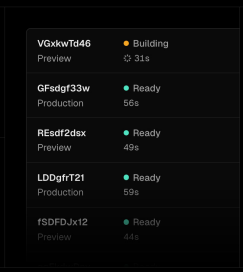

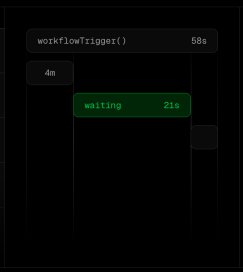

DX Platform

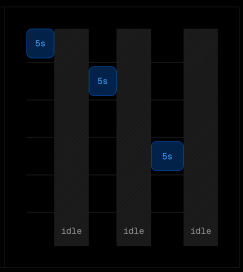

Deploy and scale

You don't have to configure queues, servers, or storage to get started with Workflow SDK on Vercel. Everything works automatically.

Zero infrastructure management. Fluid compute, serverless functions, queues and persistence work out of the box.

Deploy confidently. Running workflows continue on their original version while new executions use the latest code.

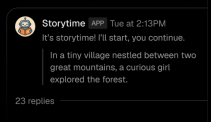

No timeout limits. Write long-running workflows without worrying about execution time limits.

Pay for what you use. Only pay for actual execution time, not idle resources.

Get started

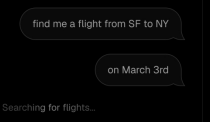

See Workflow SDK in action with one of our templates.

All examples

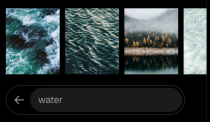

Story Generator Slack Bot

A Slack bot that generates children's stories from collaborative input.

Flight Booking App

Use Workflows on Vercel to make AI agents reliable and production-ready.

Natural Language Image Search

A free, open-source template for building natural language image search.
